CSCE 190: The AI problem

Recently, with the rise in popularity of generative artificial intelligence, there are large amounts of exaggerated, conflicting, and fear mongering claims, from both anti and pro generative AI individuals, that have no references to any actual credible sources. However, the availability of information online fact checking these claims is lacking. There aren't sufficient credible sources of information as to what harm and good generative AI is actually doing and how those pros and cons will develop in the future as AI becomes more and more pervasive.

This leads to the problem statement of: There is a pressing lack of information relating to the validity of numerous claims relating to the harm and benefits of generative artificial intelligence found online.
